

# ABSTRACT

When silicone rubber-impregnated and/or coated fabric  
5 pieces are mated, with their treated surfaces inside, and  
joined along a periphery to form a bag, a silicone rubber  
composition having a tris(trialkoxysilylalkyl) isocyanurate  
blended as an adhesion promoter is used as a sealer where the  
peripheral portions of the fabric pieces are joined together  
10 whereby an improved bond is established therebetween.
